

USER MANUAL

Refrigerated and heated laboratory centrifuge **MPW-260RH**

Read before use!

Serial number of the centrifuge:

For centrifuges with serial no (SN): from 10260RH006020

This manual was prepared with special care. MPW MED. INSTRUMENTS may change the manual at any time and without notice because of improvements, typographical errors or improvements to facilities. All rights reserved. No part of this User Manual may be modified, distributed, published or reproduced without the prior permission of MPW MED. INSTRUMENTS.

You can find the current version of the user manual on our website under:
mpw.pl/en – DOWNLOAD section (one can choose demanded language version of website).

Warning signs:

	WARNING! Warning of potential injury or health risk.
	DANGER! Risk of electric shock with potential for severe injury or death as a consequence.
	DANGER! Biohazard with potential for risk to health or death as a consequence.
	DANGER! Risk of explosion with potential for severe injury or death as a consequence.

1 Application

The MPW-260RH centrifuge (with cooling and heating) belongs to the family MPW-260/R/RH of the table top laboratory centrifuges for in vitro diagnostic (IVD). Devices are used for separation samples taken from people's, animal's and plant's components of different densities, under the influence of the centrifugal force, to provide information about their biological state.

Its construction ensures easy operation, safe work and wide range of applications at laboratories engaged in routine medical analyses, biochemical research works etc.

In the centrifuge, it is prohibited to centrifuge caustic, inflammable and explosive preparations.

2 Technical specification

manufacturer	"MPW MED. INSTRUMENTS" SPÓŁDZIELNIA PRACY, Boremlowska 46 Street, 04-347 Warsaw				
type	MPW - 260RH				
mains voltage (L1+N+PE)	230V	100V	110V	120V	127V
	±10%		±5%		
mains frequency,	50Hz	60Hz	60Hz		
current protection [A]	T 10A				
cooling medium	R452A (CFC/HCFC free)				
capacity (max.)	500 ml				
speed – RPM	90 ÷ 18000 rpm (step 1 rpm)				
force – RCF	24270 x g (step 1 x g)				
kinetic energy (max.)	8800 Nm				
running time	00:00:01 ÷ 99:59:59 – [hours, min., sec] (step 1s)				
time counting	since start button is pressed / since preselected speed is reached				
short-time operation mode – SHORT	yes				
continuous operation mode – HOLD	yes				
user programs	100				
adjustable temperature	-20 ÷ 55°C* (step 1°C)				
initial cooling/heating PROG 99 (90 ÷ 2500 RPM)	yes / yes				
guaranteed temperature with max. rotor speed	≤4°C				
cooling/heating without centrifuging	yes / yes				
cooling/heating with centrifuging	yes / yes				
acceleration (ACEL)	10 linear curves				
deceleration (DECEL)	10 linear curves				
programmable non-linear curves:					
acceleration	10				
deceleration	10				
USB communication	yes				
Electromagnetic compatibility	according to PN-EN 61326-1:2006				
ambient conditions	PN-EN 61010-1 (p.1.4.1)				
set-up site	indoors only				
ambient temperature	2° ÷ 40°C				
humidity (maximum relative humidity)	< 80%				
installation category	II	EN 61010-1			
pollution degree	2	EN 61010-1			
safety area	300 mm				
degree of protection	IP20				
height (H)	315 mm				
width (W)	365 mm				
depth (D)	660 mm				
height with open cover (H _{oc})	620 mm				
noise level	<60 dB				
power consumption	800W				
weight 230V	43,9 kg				
weight 120V	46,1 kg				

*time and possibility of obtaining a set temperature is dependent on multiple factors , including: rotor type, established RPM, ambient temperature;
accuracy ±3°C appropriate for place of temperature sensor

Menu languages: POLISH, ENGLISH, GERMAN, SPANISH, ITALIAN, PORTUGUESE, RUSSIAN, SWEDISH, FRENCH, CZECH.

3 Installation

Open the package. Remove the box containing the accessories. Take out centrifuge from the container. Keep the box and packing materials in case of service shipping.

3.1 Content of the package

name	pcs.	cat no.
centrifuge MPW-260RH	1	10260RH/2-5 10260RH/1-6 (type and supply version dependent)
complete clamp	1	17142
spanner for the rotor	1	17099T
spanner for emergency opening of the cover	1	18640
power cord – 230V / 120V	1	17866/17867
fuse WTA T10A – 230V / 120V	2	17863
vaseline 20ml	1	17201
USB A-A cable	1	16655
user manual	1	See page 1.

3.2 Location

	<ul style="list-style-type: none"> ▪ Ensure safe location. ▪ The centrifuge shall not be located near source of heat and shall not be subjected to direct sunlight. ▪ Centrifuge should be flat-levelled. Effect of levelling shall be ensure by stable and flat-levelled table top for the centrifuge. ▪ Centrifuge should be set horizontally on a rigid base. ▪ It is necessary to ensure a ventilation zone of the minimum 30cm round the centrifuge from every direction. Do not veil ventilation holes ! ▪ Table for centrifuge should posses safety zone of the minimum 30cm round the centrifuge from every direction (safety needs in case of malfunction according to EN 61010-020). ▪ Table for centrifuge should be free of containments before locating of centrifuge. ▪ Passed parameters of the centrifuge are referring to the above named temperatures (see 2.Technical specification). ▪ At the change of the place from cold to warm one, condensation of water will occur inside the centrifuge. It is important then that sufficient time be provided for drying the centrifuge prior to starting the centrifuge again (min. 4 hours). ▪ Do not position the centrifuge so that it is difficult to operate the power switch. ▪ Supply voltage given on the name plate has to be consistent with local supply voltage. MPW MED INSTRUMENTS laboratory centrifuges are 1st safety class devices and they are provided with the three-core cable with the plug resistant
---	---

	<p>to dynamic loadings. Mains socket have to be provided with the safety pin (protective earth (PE)).</p> <ul style="list-style-type: none"> ▪ It is recommended to install emergency cut-out that shall be located far from the centrifuge, near the exit or beyond the room.
	<ul style="list-style-type: none"> ▪ Before switching on, check whether the centrifuge is connected to power supply correctly. It is obligatory to use only power cord recommended by manufacturer (17866 for 230V, 17867 for 120V)

3.3 *Current protection*

	<p>The centrifuge is equipped with thermal current protection. Fuse is situated in the plug-in socket unit at back wall of the centrifuge.</p>
---	--

4 Safety notes

4.1 *Operating personnel*

	<ul style="list-style-type: none">▪ Laboratory centrifuge can be operated by laboratory personnel after getting acquainted with user manual.▪ This User Manual is part of the device.▪ User manual shall be always held near the centrifuge.▪ The centrifuge can not be misused.▪ If the centrifuge is used in a manner not specified by the manufacturer, the protection provided by the device may be impaired.
---	--

4.2 Loading the rotor

- Fix the rotor on the motor axis firmly.
- Avoid unbalance.
- Load opposite buckets with the same accessories.
- Centrifugation of the test tubes of different sizes:
 - There is a possibility to centrifuge test tubes of different sizes; however, it is absolutely necessary in such cases that opposite buckets and round carriers be the same.
 - Mass of different containers with test tubes spun at the same time has to be comparable. Swing-out rotors must be equipped with all (two or four –dependent to type of rotor) buckets.
- Lubricate the swing-out rotor journal pins.

CORRECT

WRONG

CORRECT

WRONG

It is necessary to insert test tubes symmetrically on the opposite sides.

	<p>FILLING TUBES</p> <ul style="list-style-type: none"> ▪ Fill test tubes outside the centrifuge. ▪ Please pay special attention to the quality and proper thickness of the glass test tubes walls. Those shall be test tubes for centrifuges. ▪ Fill the rotor equipment to the same weight to prevent the centrifuge from being unbalanced.
---	---

4.3 Safety hints

	<p>ROTORS MAINTENANCE</p> <ul style="list-style-type: none"> ▪ Lubricate the swing-out rotor journal pins. ▪ Use only accessories in good condition. ▪ Protect equipment against corrosion using accurate preventive maintenance.
---	---

	<p>HS ACCESSORIES MAINTENANCE</p> <ul style="list-style-type: none"> ▪ Make sure that rubber O-rings are lightly coated with silicone grease. Use high vacuum grease, e.g. type „C” by LUBRINA.
---	---

	<p>HAZARDOUS MATERIALS</p> <ul style="list-style-type: none"> ▪ MPW accessories are not biotight. For centrifuging infectious materials it is necessary to use hermetically closed tubes meeting demands of biotightness, in order to prevent germs migration into the centrifuge and beyond it. ▪ It is not allowed to subject to centrifugation toxic or infectious materials with damaged leak proof seals of the rotor or test-tube. Proper disinfection procedures have to be carried out when dangerous substances contaminated the centrifuge or its accessories.
---	---

	<p>EXPLOSIVE AND COMBUSTIBLE MATERIALS</p> <ul style="list-style-type: none"> ▪ It is not allowed to centrifuge explosive and inflammable materials. ▪ It is not allowed to centrifuge substances prone to reacting in result of supplying high energy during centrifugation. The centrifuge can not be operated in explosion-endangered areas. ▪ It is not allowed to centrifuge materials capable of generating inflammable or explosive mixtures when subjected to air.
---	--

4.4 Maintenance conditions

	<p>START-UP</p> <ul style="list-style-type: none">▪ Prior to switching the centrifuge on, one shall read carefully all sections of this user manual in order to ensure smooth operation and avoid damages of this device or its accessories.▪ In order to protect the centrifuge against unbalance, fill in the test tubes up to the same weight.
	<p>TRANSPORTATION</p> <ul style="list-style-type: none">▪ Centrifuge must not be transported with the rotor mounted on the shaft..
	<p>GENERAL HINTS</p> <ul style="list-style-type: none">▪ One must use original rotors, tubes and spare parts only.▪ In case of faulty operation of the centrifuge one shall ask for assistance of service of MPW MED. INSTRUMENTS company or its authorized representatives.▪ It is not allowed to switch the centrifuge on if it is not installed properly or rotor is not fitted correctly.
	<p>CENTRIFUGED SUBSTANCES</p> <ul style="list-style-type: none">▪ It isn't allowed to exceed load limit set by the manufacturer. Rotors are intended for fluids of average homogeneous density equal to 1,2 g/cm³ or smaller when centrifugation is carried out at maximum speed. When fluids of higher density shall be used, then it is necessary to change density of centrifuges sample in PARAM/DENSITY field.

The centrifuge must be inspected by an authorized service provider at least once a year (after the warranty period). For example, the corrosive environment may be the reason for more frequent control. The tests shall be completed by issuing a validation protocol specifying checks on the technical condition of the laboratory centrifuge. It is recommended that you set up a document that records any repairs and inspections. Both of these documents should be stored at the place of use of the centrifuge.

	<p>INSPECTION PROCEDURES CARRIED OUT BY THE OPERATOR</p> <p>Operator has to pay special attention to the fact that the centrifuge parts of key importance due to safety reasons are not damaged. This remark is specifically important as for:</p> <ul style="list-style-type: none"> ▪ Centrifuge accessories and especially structural changes, corrosion, preliminary cracks, abrasion of metal parts. ▪ Screw connections. ▪ Inspection of seals of the buckets if such are used. Special attention must be paid to all of the rubber (seals) parts. In the case of damage or visible structural changes defective parts must be replaced for new immediately (Set of seals Cat. No. 18591 available from the manufacturer). ▪ Control of execution of the guarantee yearly technical inspection of the centrifuge (after lapse of guarantee).
	<ul style="list-style-type: none"> ▪ Only the manufacturer-specified buckets, included in the equipment list, as well as centrifuge tubes, which diameter, length and durability are suitable, should be used for spinning in this centrifuge. The use of equipment made by other manufacturers should be consulted with the manufacturer of the centrifuge. ▪ It is not allowed to lift or shift the centrifuge during operation, and rest on it. ▪ It is nor allowed to stay in the safety zone within 30 cm distance around the centrifuge neither leave within this zone some things, e.g. glass vessels. ▪ It is not allowed to put any objects on the centrifuge.

	<p>COVER OPENING</p>
	<ul style="list-style-type: none"> ▪ It is not allowed to open the cover manually in emergency procedure when rotor is still turning.

	ROTORS
	<ul style="list-style-type: none"> ▪ It is not allowed to use the rotors and round carriers with signs of corrosion or other mechanical defects. ▪ It is not allowed to centrifuge highly corrosive substances which may cause material impairment and lower mechanical properties of rotor and round carriers. ▪ It is not allowed to use rotors and accessories not admitted by the manufacturer. Let to use commercial glass and plastic test tubes, which are destined to centrifuging in this laboratory centrifuge. One should absolutely not use poor quality elements. Cracking of glass vessels and test tubes could result in dangerous vibration of the centrifuge. ▪ It is not allowed to carry out centrifugation with the rotor caps taken off or not driven tight.

4.5 *Unbalance*

The centrifuge is provided with the rotor unbalance sensor and when it will be activated, centrifugation process will be stopped through fast braking and at the same time an error message will be displayed. Cancellation of this error is possible only through pressing **BACK, STOP, COVER, SET** or **▲▼◀▶** key after stopping of the rotor.

One must check if rotor was correctly loaded, close the cover and once more start the program. In order to protect the rotor against improper work, it has to be provided with identically filled buckets, carriers, test-tubes etc. for getting the best balance possible (see section “4.2. Loading the rotor”).

Then close the cover and restart the program.

	<p>Unbalance causes noise and vibrations during operation, and adversely affects power transmission system (motor, shock absorbers). The better balance, the smoother will be the centrifuge operation and therefore longer life of usage of the driveline. Moreover, the ideal separation level is then obtained, as already separated constituents would not be moved up by vibration.</p>
---	--

Emergency stop

In any moment of centrifuging it is possible interrupt the process and fast stop the rotor. Single-time pressing of the **STOP** key will make centrifuging stop with acceleration characteristics set in the program (after pressing the **SET** or **STOP** key, the device returns to the main screen). Pressing and holding it up to 1s will make the centrifuging stop with the most strict characteristic.

4.6 *Residual risk*

The centrifuge is built according to the state-of-the-art and the recognized safety regulations. Nevertheless, still remain some level of residual risk due to improper operation and malfunctions. It is possible to decrease residual risk by strictly applying user manual conditions and correcting malfunction which could threaten safety, immediately.

5 Operating

5.1 Centrifuge overview

New generation of MPW MED. INSTRUMENTS laboratory centrifuges is provided with state-of-the-art microprocessor control systems, very durable and quiet asynchronous brushless motors and accessories consistent with requirements of the present-day user.

5.2 Centrifuge description

Fig.1. General view

- 1. Power switch
- 2. USB
- 3. Control panel

- 5. Inspection glass
- 6. Point of emergency lid opening

Fig.2. Right side of centrifuge

Fig.4. Mains socket back of the centrifuge

- 1. Plug-in socket
- 2. Fuse socket

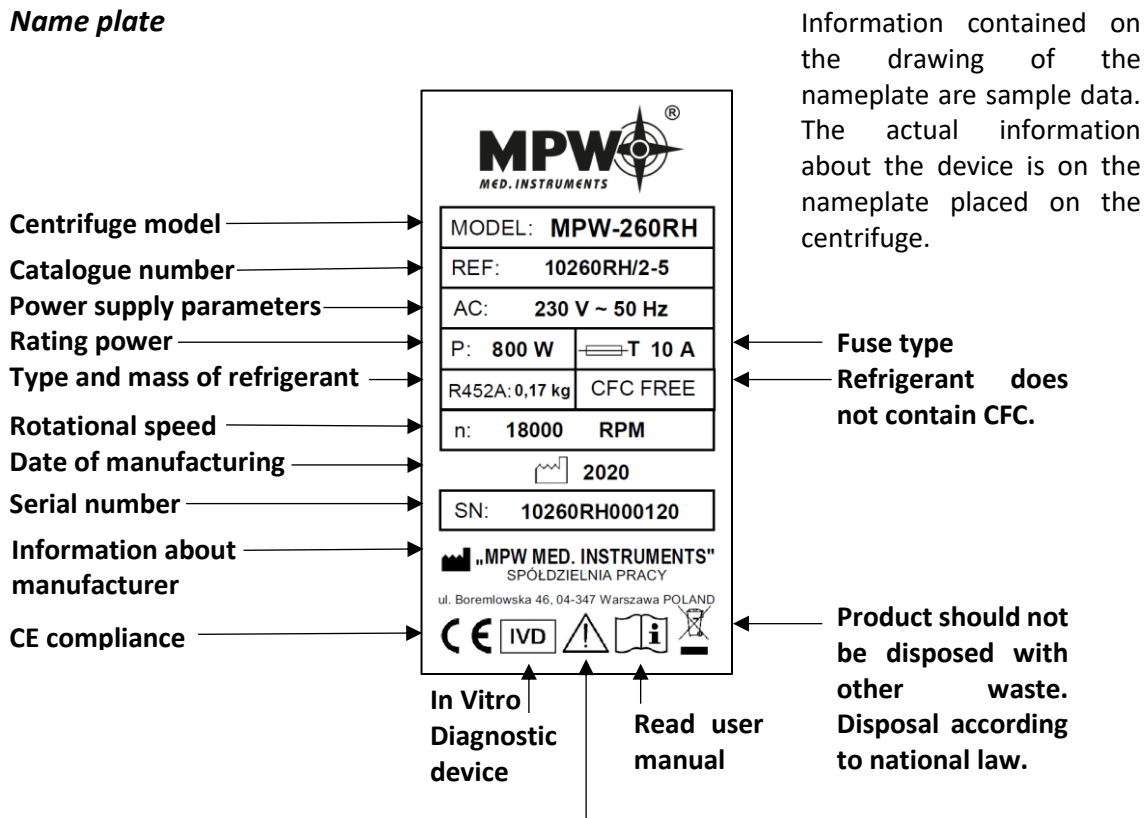

- 1. Motor axle
- 2. Rotor
- 3. Rotor lid
- 4. Complete clamp

Fig.3. Assembly of angle rotor

5.3 Construction

The centrifuge has rigid self-supporting structure. Housing was made of sheet of aluminum, back made of steel sheet. Front and cover was made of ABS type plastic. Cover is fixed on steel axles of hinges and from the front it is locked with electromagnetic lock blocking possibility of opening during centrifugation. The rotation chamber is made of stainless steel sheet.

5.4 Name plate

Pay attention when you are seeing this symbol. Operating of centrifuge may be potentially riskful.

5.5 Rotor and accessories installation

- Connect the centrifuge to the mains (master switch on the back side of the centrifuge).
- Turn on the centrifuge (button on the side of the centrifuge).
- Open the cover of the centrifuge by pressing the **COVER** key (see section “6.1. Control panel”). Prior to putting the rotor in, one has to check if the rotating chamber is free of impurities, e.g. such as dust, glass splinters, residues of fluids that must be taken away.
- One shall fit the rotor on the motor shaft driving it home on the cone.
- Screw-in the clamp for fixing the rotor (clockwise) and screw it tightly home with the supplied spanner for the rotor.
- Swing-out rotors have to be provided with the buckets in all seats. One should remember that every buckets swings individually. Bucket suspension studs should be lubricated periodically with petroleum jelly.

- In case of rotors designed with the cover they must not be used without it. Rotor covers must be closed exactly. Rotor covers ensure smaller drags of the rotors, proper setting of the test-tubes and airtight sealing.
- One should use only buckets intended for selected types of the rotor.
- Fill test tubes outside the centrifuge.
- In case of centrifuging in an angle rotor, test tubes (buckets) have to be filled properly in order to prevent from pouring fluids during centrifuging.

- Tubes must be filled in such a way that the centrifugal material does not float out of the bucket during centrifugation.

One shall fill tubes according to formula:

$$\text{Max liquid level} < \text{Tube height} - \frac{\text{Internal tube diameter}}{2}$$

Additionally observe the manufacturer's restrictions about the filling of the test tube.

It is recommended to equalize vessels loads as much as possible in order to ensure minimal vibrations during operation.

- **In order to prolong lifetime of the rotor and gaskets, it is recommended to lubricate rotor's pins, used for hanging buckets, undercuts for pins in buckets, gaskets and threaded parts with the petroleum jelly.**
- For replacement of the rotor one shall unscrew clamp and then grab the rotor with both hands at opposite sides, taking it away from drive shaft by pulling it up.

5.6 Control device

The microprocessor control unit of the centrifuge ensures broad possibilities of providing, realization and reading of work parameters.

5.7 Setting parameters

Data setting and read-out system forms hermetically closed keyboard with distinctly accessible operation points. Easily readable displays signalling individual performed operations facilitate operator's programming and recording of parameters and condition of the centrifuge. The centrifuge is provided with the USB interface that enables connection of the centrifuge to external PC unit with the printer and recording the centrifugation parameters.

5.8 Safety features

Cover lock

The centrifuge can be started only with properly closed cover. While, the cover can be opened only after stopping the rotor. In case of emergency opening of the cover during operation, the centrifuge drive will be immediately switched-off and the rotor will brake till complete stopping.

Unbalance detecting

When loads of opposite buckets or carriers in rotors are unbalanced, the drive will be switched-off during acceleration or operation of the centrifuge – and the error message will be displayed.

Rotor verification and checking compatibility with loaded program

Directly after starting centrifuging, a unit verifies the type of the rotor applied and in the case of its incompatibility with the type indicated in the application or absence of the rotor, the spinning process shall be stopped with simultaneous displaying the error message. The conformity of the type of the rotor is signalled with a single audible signal. In case auto identification (see 9.8 Other) option is checked, proper rotor will be automatically chosen, without user engagement.

Rest state inspection

Opening of the centrifuge's cover by **COVER** button is possible only when the rotor is in the state of rest. Check if the symbol , detailed in the chapter 6.2, is visible on the screen. Use inspection glass in cover for be sure if rotor is in the rest state. When the rotor is being stopped, braking symbol  or  (see "6.2. Display") is visible and goes off when it is stopped. Emergency cover opening during rotor running is prohibited.

Checking of excessive temperature

If temperature in rotation chamber exceeds 65°C caused by, for example, malfunction of cooling system, drive will be switched off and error message will be displayed. The reboot is only possible after chilling device.

6 Centrifuging

Power switching ON/OFF is carried out with master switch situated on the right side wall of the centrifuge. All settings on the centrifuge are done by means of the control panel.

6.1 Control panel

The control panel placed on the front casing serves the purpose of controlling centrifuge operation.

Control panel MPW-260RH

	SHORT ¹	short-time centrifuging
	START	start centrifugation run
	STOP ²	end centrifugation run
	COVER	cover opening
	FAST COOL	start fast cooling mode (MPW-260R and MPW-260RH only)
	BACK/ OPTIONS	exit the current menu / enter to submenu of options (keep held down within 1 s.)
	UP	navigation in menu / increasing values
	DOWN	navigation in menu / decreasing values
	LEFT	navigation in menu
	RIGHT	navigation in menu
SET	SET	changing parameters / confirming changes

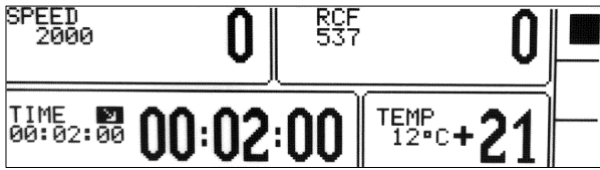

¹ the centrifuge is working as long as the key is pressed

² first-time pressing press – will make stopping centrifuging with acceleration characteristics set in the current program,
second-time pressing – will make stopping the centrifuging as fast as possible (quickest characteristic) (after stopping the rotor, the message can be cancelled by pressing any key except **SHORT**, **START** and **COVER** – if cover is open)

During setting of the parameters, it serves for exiting without introducing changes, same as **BACK** key.

6.2 Display

The display is located in the centre of the control panel. The main screen variants are presented below. Blinking of field on display means it is selected and ready to set, blinking of field is visualised as highlighted in the user manual.

	<p>After switching on centrifuge, welcome screen appears. After disappearing the welcome screen, it is possible to setting up parameters.</p>
	<p>Simplified display mode is set as default, there is possible to switch to normal (see chapter “9.3. Types of main screen”).</p>
	<p>Normal display contains an expanded number of settings visible during operation.</p>
<ul style="list-style-type: none"> ▪ Detailed information on display modes is provided in chapter “9.3. Types of main screen”. 	

SPEED	rotor speed	assigned/measured
RCF	relative centrifugal force	assigned/measured
TIME	centrifuging time	assigned/measured

6.3 Setting up RPM, RCF, time, temperature

On the main screen, it is possible to set:

rotating speed - RPM	SPEED
relative centrifugal force (multiple of g-force)	RCF
centrifuging time	TIME
centrifuging temperature	TEMP

Exemplary change of **SPEED** setting:

- Press **SET** (to enter edit mode) –  appears.
- Via **▲▼◀▶** keys mark **SPEED** field (blinking).
- Press **SET-** blinking.
- Via **◀▶** choose order of magnitude of changing value (blinking).
- With **▲▼** choose demanded value.
- Repeat above two steps for other orders of magnitude.
- Confirm settings by pressing **SET**.
- Press **BACK**.

- When RPM is changed, RCF is automatically corrected.

Exemplary change of **RCF** setting:

- Press **SET** (to enter edit mode) –  appears.
- Via **▲▼◀▶** keys mark **RCF** field (blinking).
- Press **SET-** blinking.
- Via **◀▶** choose order of magnitude of changing value (blinking).
- With **▲▼** choose demanded value.
- Repeat above two steps for other orders of magnitude.
- Confirm settings by pressing **SET**.
- Press **BACK**.

- When RCF is changed, RPM is automatically corrected.

- When setting the speed value, setting "hundreds" or "thousands" resets the "units" and "tens".

Exemplary change of TIME setting:	
	<ul style="list-style-type: none"> ▪ Press SET (to enter edit mode) -  appears. ▪ Via     keys mark TIME field (blinking).
<p style="text-align: center;">00:02:00 [hh : mm : ss]</p> <p>e.g.: centrifuging time – 2 minutes 00 seconds</p>	<ul style="list-style-type: none"> ▪ Press SET -  blinking. ▪ Via   choose order of magnitude of changing value (blinking). ▪ With   choose demanded value. ▪ Repeat above two steps for other orders of magnitude. ▪ Confirm settings by pressing SET. ▪ Exit edit mode by pressing BACK.
00:02:00	set value
02:00	current value (most significant digits)

HOLD mode – continuous run mode	
	<ul style="list-style-type: none"> ▪ To run centrifuging in HOLD mode set 00:00:00 time. ▪ To end centrifuging in HOLD mode press STOP.

Exemplary change of **TEMP** setting:

- Press **SET** (to enter edit mode) –  appears.
- Via **▲▼◀▶** keys mark **TEMP** field (blinking).
- Press **SET** key.
- With **▲▼** choose demanded value.
- Confirm settings by pressing **SET**.
- Press **BACK**.

6.4 Users programs

After switching centrifuge on, program that was used in previous session is being loaded. If any program was not used in previous session, centrifuge resume the last chosen parameters.

Program choosing:

Entering the program selection mode for the **simplified display**:

- Press and hold  by 1 second.
- An additional selection window will appear.
- Choose **PROG.** with ▲▼.
- Press **SET**, the selection frame will appear.

Entering the program selection mode for the **normal display**:

- Press **SET** key –  appears.
- Via ▲▼◀▶ keys mark **PROG--** field (blinking)
- Press **SET** key – list of programs is visible.

Program selection mode tab:

No	SPEED	RCF	TIME	TEMP	ACC	DEC	ROT

3		CURVES	0	0	11740
4		NEW PROGRAM			

LOAD, SAVE, DELETE, CURVES, NEW PROGRAM
refer chosen program which is marked by ▶.

▶ – currently chosen program.

- **LOAD** – load selected program

No	SPEED		C	DEC	ROT
0	4590	SAVE ?	0	0	11740
1	4590		0	0	11740
▶ 2	5090	YES	0	0	11740
3		NO			

- **SAVE** – save settings as a program (confirm by selecting **YES** and pressing **SET**)

No	SPEED		C	DEC	ROT
0	4590	DELETE ?	0	0	11740
1	4590		0	0	11740
▶ 2	5090	YES	0	0	11740
3		NO			

- **DELETE** – delete program (confirm by selecting **YES** and pressing **SET**)

- **CURVES** – creating characteristics

- **NEW PROGRAM** – creating new program

NEW PROGRAM – enter to create new program mode (as below)

Creating a new program:

SPEED 2000	0	RCF 300	0
TIME 00:02:00	00:02:00	TEMP 20°C	+20
PROG: --	11199/-----	PARAM→	MENU→

No	SPEED	RCF	TIME	TEMP	ACC	DEC	ROT
0	4590	2826	HOLD	20	0	0	11740
1	4590	2826	00:01:00	20	0	0	11740
2	5090	3476	00:02:00	20	0	0	11740

No	SPEED		C	DEC	ROT
0	4590	LOAD	0	0	11740

2	5090	DELETE	0	0	11740
3		CURVES	0	0	11740
		NEW PROGRAM			

- Press **SET** key.
- Via ▲▼◀▶ keys mark **PROG** field (blinking).
- Press **SET** key. List of programs is visible, choose demanded position (number of program).
- Press **SET** key- menu of program settings will appear.
- Choose **NEW PROGRAM** press **SET** and **BACK**, and then set demanded parameters of centrifuging (look chapter “6. Centrifuging”).
- In case you want to register new program, back to the **PROG** menu and save it as described before.

Changing parameters during centrifuging:

- There is a possibility to change parameters: **SPEED, RCF, TIME, TEMP** during centrifuging. Such modifications inactivate currently running program. When program was set, modification during run is represented by **PROG --** symbol (instead of the program number).

CURVES – create acceleration or deceleration characteristics

No	SPEED	RCF	TIME	TEMP	ACC	DEC	ROT
0	4590	2826	HOLD	20	0	0	11740

PROGRAM: 2
CURVES

ACCELERATION
DECCELERATION

- With ▲▼ keys choose **ACCELERATION** to create acceleration characteristics or **DECCELERATION** to create deceleration characteristics
- Confirm selection by pressing **SET**.

Acceleration characteristic

PROG / CURVES / **ACCELERATION**

After choosing **PROG → CURVES → ACCELERATION** the window of the characteristics wizard will be displayed:

Current acceleration characteristic connected with the loaded program will be displayed on the screen.

SPEED or **4000** displayed (example):

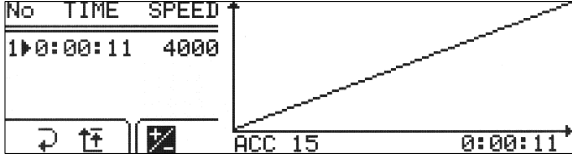

NO.	section no. (max. 4)
TIME	total acceleration time
SPEED	final RPM
ACC:15	characteristic's no. (10-19)
	adding a new section
	deleting last section
	editing sections
	exiting from characteristics wizard
	switching RPM/RCF

In the first moment, the field is marked. Pressing the **SET** key will cause returning to the **PROG → CURVES** fold, without making changes in the acceleration characteristics. To start editing single section characteristic with choose icon and press **SET**.

SECTION 1.

Entering the characteristic sections editing menu (time will start blinking):

		editing value (flashing means editing the given value)
<ul style="list-style-type: none"> ▪ Press SET ▪ With ▲▼◀▶ choose time for section ▪ Press SET ▪ With ▼ choose ↻ and press SET, to finish editing the characteristic. Finishing edition can be also done by pressing BACK button 		

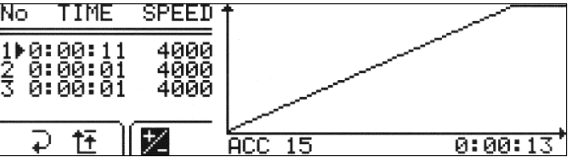

After the end of programming time and/or speed, the graphical display of the section (of all sections) **TIME+SPEED** of the user's acceleration characteristics will occur. The set sections of the characteristic are illustrated in the graph on the right side of the screen.

ADDING AND EDITING SECTIONS

To program next sections, select the ⊕ icon with the ◀▶ buttons and press **SET**. A new section (sections) will appear with a time of 1 second and a speed equal to the maximum speed.

To start editing a newly added section (sections), select the ✎ icon with the ◀▶ buttons and press **SET**, and follow the instructions given below.

Entering the characteristic sections editing menu (time will start blinking):

	<p>The maximum speed value for the section cannot be higher than the maximum speed value for the characteristic (for the last section). It is possible to create "descending" sections.</p>
<ul style="list-style-type: none"> ▪ With ▲▼◀▶ highlight time or speed for desired section ▪ Press SET ▪ With ▲▼◀▶ choose value ▪ Press SET ▪ Repeat until setting all the sections ▪ To finish editing characteristic with ▲▼ choose ↻ and press SET. Finishing edition can be also done by pressing BACK button 	

DELETING SECTIONS

In the characteristics wizard:

- Select the  icon with the  buttons and press **SET**
- In the "Delete?" window, use  buttons to select YES to confirm deleting the characteristic section or NO to cancel
- Press **SET**

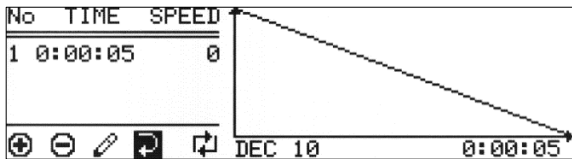

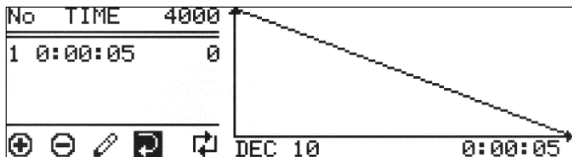

It is possible to program the characteristic using RCF. To do this, in the characteristics wizard window, select the  icon with the  buttons and press **SET**.

SAVING CREATED CHARACTERISTIC

In the characteristics wizard:

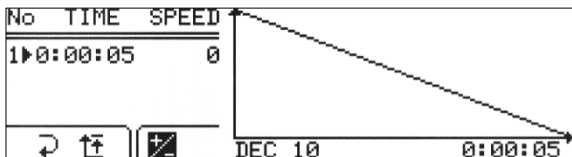

- Select the  icon with the  buttons and press **SET**
- In the "Save?" window, use  buttons to select YES to confirm saving the characteristic or NO, to exit without saving
- Press **SET**

Deceleration characteristic:	PROG / CURVES / DECELERATION	
<p>After choosing PROG → CURVES → DECELERATION the window of the characteristics wizard will be displayed:</p> <p>Default deceleration characteristics connected with the loaded program will be displayed on the screen. Creating of deceleration characteristics takes place similarly to acceleration characteristics.</p>		
<p>SPEED or 4000 displayed (example):</p>  	NO.	section no. (max. 4)
	TIME	total acceleration time
	SPEED	final RPM
	DEC:10	characteristic's no. (10-19)
		adding a new section
		deleting last section
		editing sections
		exiting from characteristics wizard
	switching RPM/RCF	

In the first moment, the  field is marked. Pressing the **SET** key will cause returning to the **PROG → CURVES** fold, without making changes in the deceleration characteristics. To start editing single section characteristic with  choose  icon and press **SET**.

SECTION 1.

Entering the characteristic sections editing menu (time will start blinking):	
	 editing value (flashing means editing the given value)
	<ul style="list-style-type: none"> ▪ Press SET ▪ With ▲▼◀▶ choose time for section ▪ Press SET ▪ With ▼ choose  and press SET, to finish editing the characteristic. Finishing edition can be also done by pressing BACK button

Speed of the last of programmed sections of the curve is equal = 0 (RPM). It is not possible to change it.

*After the end of programming time and/or speed, the graphical display of the section (of all sections) **TIME+SPEED** of the user's deceleration characteristics will occur. The set sections of the characteristic are illustrated in the graph on the right side of the screen.*

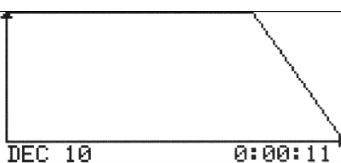

ADDING AND EDITING SECTIONS

To program next sections, select the  icon with the  buttons and press **SET**. A new section (sections) will appear.

To start editing a newly added section (sections), select the  icon with the  buttons and press **SET**, and follow the instructions given below.

Entering the characteristic sections editing menu (time will start blinking):

No	TIME	SPEED
1▶	0:00:05	4000
2	0:00:03	4000
3	0:00:03	0

   DEC 10 0:00:11

The maximum speed value for the section cannot be higher than the maximum speed value for the characteristic (for the first section). It is possible to create "ascending" sections.

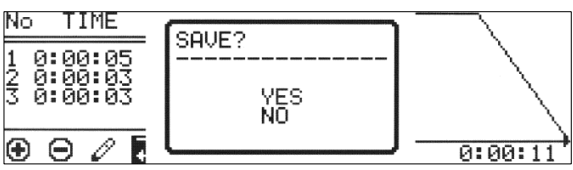

- With  highlight time or speed for desired section
- Press **SET**
- With  choose value
- Press **SET**
- Repeat until setting all the sections
- To finish editing characteristic with  choose  and press **SET**. Finishing edition can be also done by pressing **BACK** button

DELETING SECTIONS

In the characteristics wizard:	
	<ul style="list-style-type: none"> ▪ Select the  icon with the ◀▶ buttons and press SET ▪ In the "Delete?" window, use ▲▼ buttons to select YES to confirm deleting the characteristic section or NO to cancel ▪ Press SET

It is possible to program the characteristic using RCF. To do this, in the characteristics wizard window, select the  icon with the ◀▶ buttons and press **SET**.

SAVING CREATED CHARACTERISTIC

In the characteristics wizard:	
	<ul style="list-style-type: none"> ▪ Select the  icon with the ◀▶ buttons and press SET ▪ In the "Save?" window, use ▲▼ buttons to select YES to confirm saving the characteristic or NO, to exit without saving ▪ Press SET

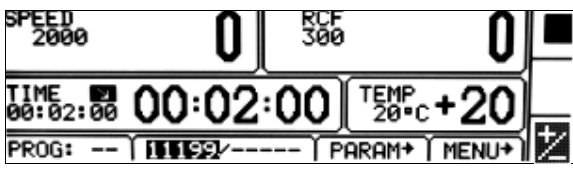

6.5 Programs with user characteristics

Loading a modified program in the **CURVES** fold is signalled by the icon on the main screen:

	<p>Icon  signals that program with user acceleration/deceleration characteristics are loaded.</p>
---	--

A change in any parameter entails the deactivation of the multi-sections curves mode.

6.6 Rotor and bucket choosing

Simplified display mode																																																		
	<ul style="list-style-type: none"> ▪ Press and hold  by 1 second. ▪ Choose rotor number (exemplary 11199/-----) with ▲▼. ▪ Press SET. ▪ Execute points described follow (below Normal display mode description) 																																																	
Normal display mode																																																		
	<ul style="list-style-type: none"> ▪ Press SET— appears. ▪ Via ▲▼◀▶ mark rotor choosing field. ▪ Press SET (Rotors and buckets list will appear). 																																																	
<table border="1" data-bbox="242 1070 817 1227"> <thead> <tr> <th>NO</th> <th>ROTOR</th> <th>BUCKET</th> <th>SPEED</th> <th>RCF</th> <th>RMAX</th> <th>RMIN</th> </tr> </thead> <tbody> <tr> <td>▶ 1</td> <td>11199</td> <td>-----</td> <td>18000</td> <td>24270</td> <td>67</td> <td>35</td> </tr> <tr> <td>2</td> <td>11210</td> <td>-----</td> <td>5000</td> <td>3997</td> <td>143</td> <td>60</td> </tr> <tr> <td>3</td> <td>11211</td> <td>-----</td> <td>5500</td> <td>4498</td> <td>133</td> <td>87</td> </tr> <tr> <td>4</td> <td>11213</td> <td>-----</td> <td>5500</td> <td>4227</td> <td>125</td> <td>79</td> </tr> <tr> <td>5</td> <td>11259</td> <td>-----</td> <td>15000</td> <td>24400</td> <td>97</td> <td>65</td> </tr> <tr> <td>6</td> <td>11273</td> <td>-----</td> <td>12000</td> <td>14006</td> <td>87</td> <td>54</td> </tr> </tbody> </table>	NO	ROTOR	BUCKET	SPEED	RCF	RMAX	RMIN	▶ 1	11199	-----	18000	24270	67	35	2	11210	-----	5000	3997	143	60	3	11211	-----	5500	4498	133	87	4	11213	-----	5500	4227	125	79	5	11259	-----	15000	24400	97	65	6	11273	-----	12000	14006	87	54	<ul style="list-style-type: none"> ▪ Via ▲▼ keys mark demanded rotor number ▪ Confirm by pressing SET. ▪ If a bucket can be selected: <ul style="list-style-type: none"> ○ With ▲▼ select demanded bucket number. ○ Press SET. ▪ Press BACK to close edition mode.

6	11273	-----	12000	14006	87	54																																												
<ul style="list-style-type: none"> ▪ It is possible to set AUTOMATIC ROTOR IDENTIFICATION. The procedure is described in subsection “9.8. Other”. 																																																		

6.7 SHORT mode

SHORT MODE – short work mode (centrifuging with pressed SHORT key)	
	<ul style="list-style-type: none"> ▪ The SHORT mode is activated by pressing and holding ▶▶(SHORT). In SHORT mode the centrifuge is working as long as the SHORT key is pressed or when set time is over. ▪ Centrifuging is stopped after releasing the SHORT key.

6.8 Finishing the centrifuging

- When preselected time is reached, centrifugation will end automatically.

- Before lapse preselected time one may stop centrifugation. Pressing **STOP** for the first time will stop centrifuging with the characteristic set in loaded program.  symbol will be shown.

- Pressing **STOP** second time will stop centrifuging with the fastest characteristic.  symbol will be shown.

- The message about cancel of centrifuging can be delete with the **STOP, SET, COVER, ▲▼◀▶** or **BACK** key.

6.9 Temporarily disabled functions

Functions written below can be temporarily disabled.

active	SPEED	RCF	TIME	TEMP	PROG —	— / — —	PARAM	MENU
THERMAL CHAMBER	●	●	●	○	●	●	●	●
STANDARD CENTRIFUGING	●	●	●	●	●	○	●	○

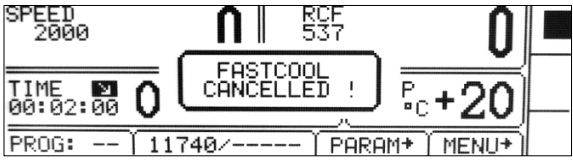

- available
- disabled

7 Temperature control

Centrifuge is equipped with ecological refrigerating system with temperature control. During centrifugation, there may appear differences in temperature on the display and temperature of the samples in the rotor. It depends on thermal conductivity of the rotor, and samples and centrifugation time, initial temperature of rotor and samples.

Exemplary change of TEMP setting:	
	<ul style="list-style-type: none"> ▪ Press SET (to enter edit mode)  – appears. ▪ Via ▲▼◀▶ keys mark TEMP field (blinking). ▪ Press SET key. ▪ With ▲▼ choose demanded value (from -20°C to 55°C). ▪ Confirm settings by pressing SET. ▪ Press BACK.
	<p>Cooling is indicated by a symbol  (blinking).</p>

7.1 Initial cooling during centrifuging –FAST COOL

	<ul style="list-style-type: none"> ▪ The parameters allowable to change at FAST COOL mode: <ul style="list-style-type: none"> ▫ temperature (lower than current temperature shown by centrifuge) ▪ In order to centrifuging reduced temperature samples (e.g. storage in the external refrigerator) centrifuge chamber, rotor and centrifuge container must be pre-cooling to the predetermined temperature. It cause minimalization of temperature differences. ▪ Initial cooling may be activated by FAST COOL key (lid must be closed – rotor is spinning at FAST COOL mode) ▪ When FAST COOL mode is active, cooling system automatically set proper parameters to obtain demanded temperature the fastest way. ▪ It is possible to exit FAST COOL mode at any time by pressing STOP key.
	<p>FAST COOL mode is marked by symbol  blinking in the right upper side of display.</p>
	<p>It is possible to exit FAST COOL mode at any time by pressing STOP key.</p> <p>Interruption of the function is signalled by a message.</p>

7.2 Initial cooling or heating without centrifuging – THERMAL CHAMBER

	PARAM → THERMAL CHAMBER
	<ul style="list-style-type: none">▪ There is possible to run centrifuge in THERMAL CHAMBER mode – cooling and heating (rotor is at standstill).▪ How to enable THERMAL CHAMBER is described in “8.5. Thermal chamber” chapter.

7.3 Cooling or heating in “START DELAY – OF TEMPERATURE” mode

	PARAM → START DELAY – OF TEMPERATURE
	<ul style="list-style-type: none">▪ Centrifuging process will start, when preselected temperature is reached.▪ How to enable run START DELAY – OF TEMPERATURE function is described in “8.8. Start delay – of temperature” chapter.

7.4 Cooling or heating in „SHORT” mode

	<ul style="list-style-type: none">▪ Cooling and heating features are available in SHORT mode.▪ How to enable run centrifugation in SHORT mode is described in “6.7. SHORT mode”.
---	---

7.5 Cooling and heating notes

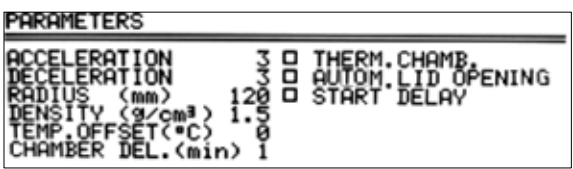

Centrifuge with cooling and heating – MPW-260RH is equipped with an efficient cooling and heating system. It allows obtaining selected temperatures in the chamber even at maximum spin speed or fast obtaining desired temperatures (e.g. 4°C and 36°C). Note that time and possibility of obtaining a set temperature is dependent on multiple factors, including: the power of the cooling system, the shape of the rotor, the rotor speed, ambient temperature, etc. The temperature on the display is appropriate for the place of the temperature sensor in the chamber, accuracy is $\pm 3^{\circ}\text{C}$. The temperature of the sample may be different.

8 Parameters of centrifugation

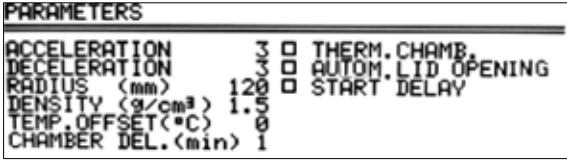

Simplified display	
	<ul style="list-style-type: none"> Press and hold  by 1 second. Choose PARAM. with ▲▼ Press SET.
Normal display	
	<ul style="list-style-type: none"> Press SET. With ▲▼◀▶ keys select PARAM. Press SET.

ACCELERATION	chosen acc. characteristic (0-the fastest, 9-the slowest)
DECELERATION	chosen dec. characteristic (0-the fastest, 9-the slowest)
RADIUS [mm]	current rotor radius [mm]
DENSITY (g/cm³)	sample density [g/cm ³]
TEMP. OFFSET (°C)	value of temperature correction
CHAMBER DEL. (min)	delay between set thermal chamber mode and start it
THERMAL CHAMBER	cooling of the chamber without centrifuging
AUTOM. LID OPENING	opening cover after centrifuging automatically
START DELAY	starting delayed (after pressing START)

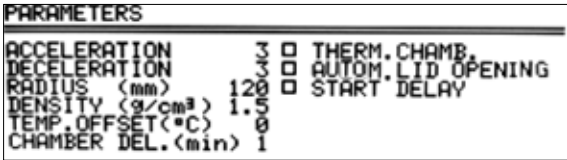

8.1 Acceleration/deceleration – changing characteristics

	<ul style="list-style-type: none"> With ▲▼ keys select ACCELERATION or DECELERATION. Press SET. With ▲▼ keys select demanded number of characteristic. Press SET. <p>ACCELERATION –10 (0 ÷ 9), linear accelerating characteristics assigned to every rotor. 0-the fastest acceleration, 9-the slowest acceleration.</p> <p>DECELERATION – 10 (0 ÷ 9), linear decelerating characteristics assigned to every rotor. 0-the fastest deceleration, 9-the slowest deceleration.</p>

<ul style="list-style-type: none"> ▪ When the function is active, the speed can be reduced to the optimum values for the FAST COOL function, when the set speed is lower than the optimum value, the rotor rotates at the set by user speed. ▪ START DELAY / OF TEMP. function cannot be run when START DELAY / OF TIME is activated. 																	

8.9 Printing report (USB)

When the centrifuging process is finished there is a possibility to obtain report. Report can be transferred to PC or printed.

PC (USB)

The elements needed to make connecting your computer via USB:

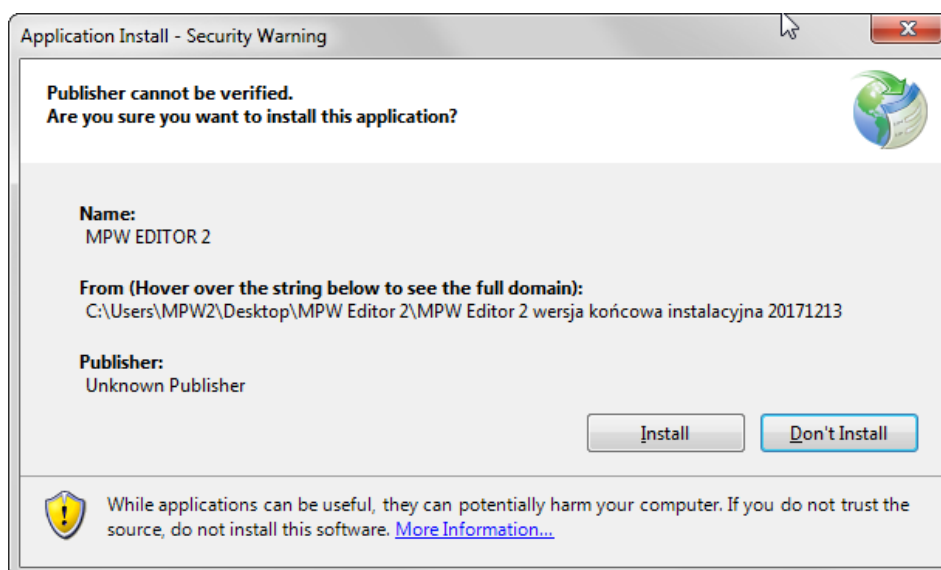

name	quantity (pcs.)	cat. No.
USB A-A cable	1	16655
MPW Editor 2 application	1	to downloaded from the website: www.mpw.pl

Operating System Requirements: **Microsoft Windows 10 (64bit).**

The Manufacturer does not guarantee that the program will work correctly with other operating systems.

Preparation

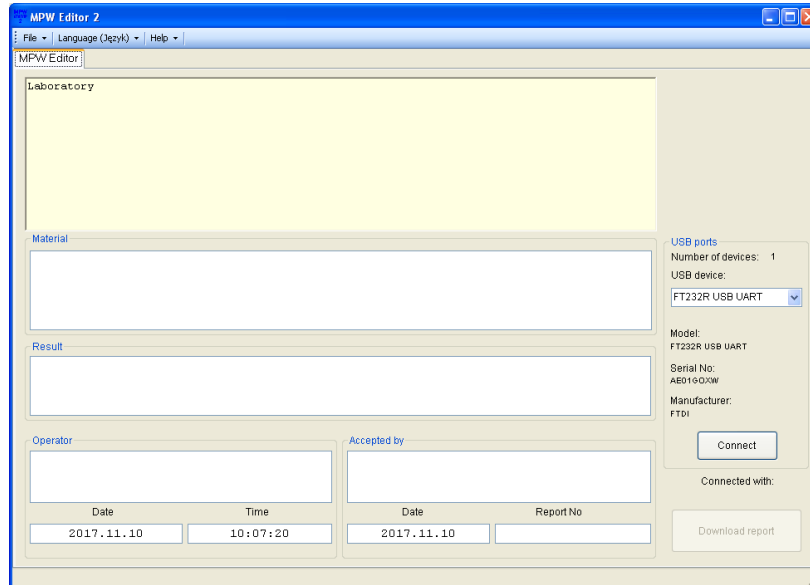

- Download installation file from website at www.mpw.pl.
- Unzip the file and run **setup.exe**.
- Install **MPW Editor 2** application on the computer, press **Install**.

- If necessary install **FTDI USB drivers** and **.NET Framework 4.0** library (download with manufacturer's website: www.mpw.pl).

Centrifuging and printing

- Run **MPW Editor 2** application.
- Choose **Język\English**

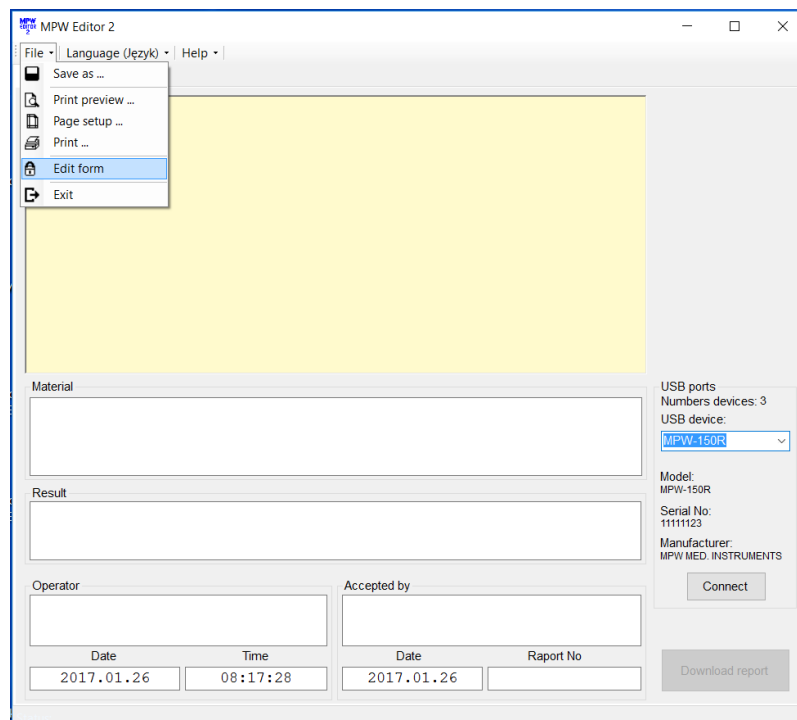

- Connect centrifuge to the PC in accordance with the „**Connection scheme**”
- Choose port assigned to the centrifuge (it will appear after connecting USB cable).

Attention:

If the interface has not been programmed: name, serial number and manufacturer's name, the device will be identified by Windows and MPW Editor 2 with the data programmed by FTDI (manufacturer USB integrated circuit) for example FT232R USB UART.

- Choose **File\Edit form**

- In the „Tytuł (Title)” field, you can place any text, for example name of the laboratory, for later use in the report template.

- Choose **File\Save form**.
- Ensure that USB device is selected from the list of devices.
- Press **Connect**. After successful communication, "PC" appears in the display.

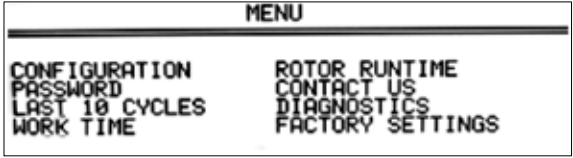

- Fill folds: „Material”, „Result”, „Operator”, „Accepted by”, „Report no” (optionally).
- When the centrifuging process is finished, press **Download the report**.
- When centrifuging process is completed, report will appear.
- Save report (**File/Save as**) or print it (**File/Print**).
- In order to get another report, press New test and press Download the report.
- After finishing the work, press **Disconnect** button (the "PC" disappears from the display of the centrifuge) and then closes MPW Editor 2.

Connection diagram

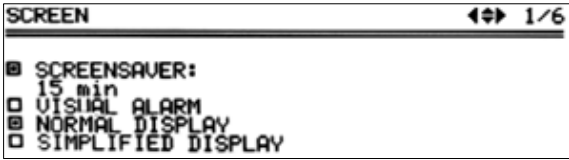

9 Menu

Simplified display	
	<ul style="list-style-type: none"> Press and hold  by 1 second. Choose MENU with ▲▼ Press SET. <p>Execute points described below (below Normal display mode description)</p>
Normal display	
	<ul style="list-style-type: none"> Press SET. With ▲▼◀▶ keys select MENU. Press SET.
	<ul style="list-style-type: none"> To navigate in MENU use ▲▼◀▶ keys. To enter menu press SET.

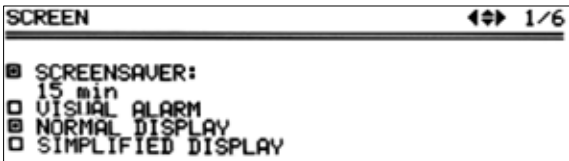

CONFIGURATION	centrifuge configuration
PASSWORD	password protection
LAST 10-CYCLES	10 last centrifugation cycles history
CYCLES	total working time of centrifuge, total number of working cycles
ROTOR RUNTIME	counting time of work and cycles amount for each rotor
CONTACT US	manufacturer's details
DIAGNOSTICS	error codes (service field)
FACTORY SETTINGS	restore factory settings

CONFIGURATION

9.1 Screen saver

Setting time of screen saver	MENU/ CONFIGURATION / SCREEN
	<ul style="list-style-type: none"> ▪ With ▲▼◀▶ keys select SCRENSAVER. ▪ Press SET and then ▼ and SET . ▪ With ▲▼ keys select demanded value from 1 to 60 minutes. ▪ Mark selection by pressing SET. ▪ Leave the menu by pressing BACK.

9.2 Visual alarm

Visual alarm	MENU/CONFIGURATION/ SCREEN
	<ul style="list-style-type: none"> ▪ Via ▲▼ keys choose VISUAL ALARM ▪ Mark it by pressing SET. <p>VISUAL ALARM cause blinking screen after ending of centrifuging or after message occurring.</p>

9.3 Types of main screen

To ensure optimal adaptation to the user's preferences, work is possible in two basic screen modes.

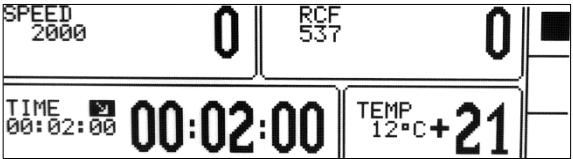

NORMAL DISPLAY - contains an expanded number of parameters visible on the display.

SIMPLIFIED DISPLAY - contains only the most important parameters visible on the display.

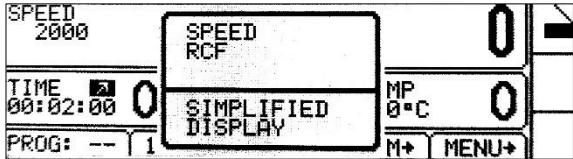

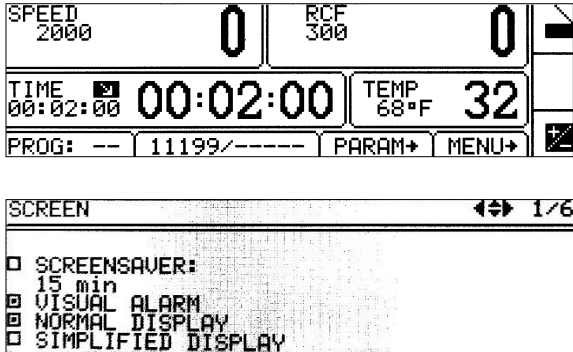

For each of the above modes, you can choose priority RPM display or RCF.

By default, the **SIMPLIFIED DISPLAY** is set

Types of main screen

NORMAL DISPLAY	SIMPLIFIED DISPLAY
	
Switch between the SPEED (RPM) and RCF display priority modes	
<ul style="list-style-type: none"> ▪ In the NORMAL DISPLAY mode, selecting the SPEED or RCF display mode is obtained by pressing and holding BACK for 1 sec. ▪ then use the ▲▼ buttons to select the desired mode (SPEED or RCF) and press SET. 	<ul style="list-style-type: none"> ▪ In the SIMPLIFIED DISPLAY mode, the selection of the SPEED or RCF display mode is obtained by pressing and holding the BACK key for 1 second. ▪ then use ▲▼ keys to select DISPLAY MODE, press SET, and then use ▲▼ keys to select the desired mode (SPEED or RCF) and press SET.

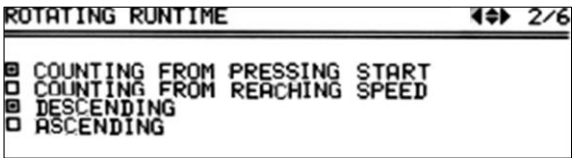

9.3.1 Switching the normal display to simplified display

Method I	
	<ul style="list-style-type: none"> ▪ Press the BACK button for 1 sec. to return to the basic display (a short menu is displayed on the screen), then: ▪ Via ▲▼ keys select SIMPLIFIED DISPLAY. ▪ Press SET.
Method II	
	<ul style="list-style-type: none"> ▪ Press SET –  appears. ▪ Via ▲▼◀▶ keys select MENU. ▪ Press SET. ▪ Via ▲▼ keys select CONFIGURATION tab. ▪ Press SET. ▪ Via ◀▶ keys select SCREEN tab. ▪ Via ▲▼ keys select SIMPLIFIED DISPLAY. ▪ Press SET. ▪ Leave menu via BACK key.

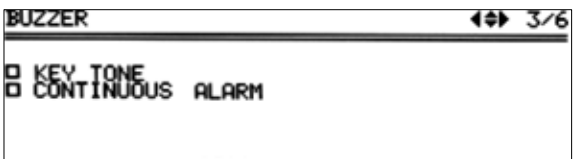

9.3.2 Switching the simplified screen to normal display

<i>Method I</i>	
	<ul style="list-style-type: none"> Press the BACK button for 1 sec.
	<ul style="list-style-type: none"> Via ▲▼ keys select DISPLAY MODE (blinking). Press SET.
	<ul style="list-style-type: none"> Then choose NORMAL DISPLAY via ▲▼ keys. Press SET.
<i>Method II</i>	
	<ul style="list-style-type: none"> Press the BACK button for 1 sec.
	<ul style="list-style-type: none"> Via ▲▼ keys select MENU (blinking). Press SET.
	<ul style="list-style-type: none"> Via ▲▼ keys select CONFIGURATION tab. Press SET. Via ◀▶ keys select SCREEN tab. Via ▲▼ keys select NORMAL DISPLAY. Press SET. Leave menu via BACK key.

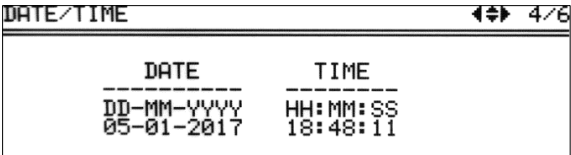

9.4 Rotating runtime

Way of time counting	MENU/CONFIGURATION/ ROTATING RUNTIME
	<ul style="list-style-type: none"> Via ▲▼ choose demanded option. Mark it by pressing SET.
Counting from:	
From pressing start →	COUNTING SINCE ROTOR IS IDENTIFIED
From reaching speed →	COUNTING FROM ASSIGNED SPEED
Presenting mode:	
Descending →	COUNTING DOWN
Ascending →	COUNTING UP

9.5 Buzzer

Switching ON/OFF short audible signals accompanying every pressing of any key. Switching ON/OFF signals after centrifuging.	MENU/ CONFIGURATION / BUZZER
	<ul style="list-style-type: none"> With ▲▼ keys select demanded option. Mark selection by pressing SET. <p>A continuous alarm means the emission of short beeps after the end of the spin, until the message about the end of the work cycle is deleted.</p>
<ul style="list-style-type: none"> Warning signals are always switched on. 	

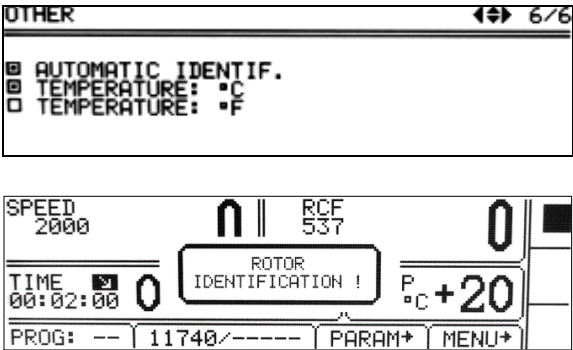

9.6 Date/time

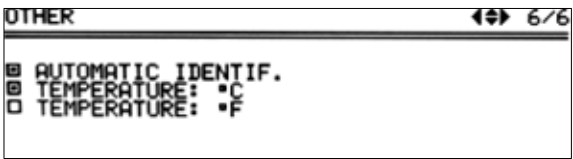

Setting up time and date	MENU/ CONFIGURATION / DATE/TIME				
 <p>DATE/TIME 4/6</p> <table border="1"> <thead> <tr> <th>DATE</th> <th>TIME</th> </tr> </thead> <tbody> <tr> <td>DD-MM-YYYY 05-01-2017</td> <td>HH:MM:SS 18:48:11</td> </tr> </tbody> </table>	DATE	TIME	DD-MM-YYYY 05-01-2017	HH:MM:SS 18:48:11	<ul style="list-style-type: none"> ▪ Press SET. ▪ Via ◀▶ keys choose demanded value. ▪ Via ▲▼ keys change chosen value. ▪ Confirm by pressing SET. ▪ Repeat above steps for other values. ▪ Press BACK.
DATE	TIME				
DD-MM-YYYY 05-01-2017	HH:MM:SS 18:48:11

10 Maintenance

10.1 *Cleaning of the centrifuge*

	<p>Pull the mains plug before cleaning.</p> <p>Before any cleaning or decontamination process other than that is recommended by the manufacturer, the user has to ask the manufacturer if the planned process does not damage the device</p> <p>For cleaning, water with soap or other water soluble mild detergent shall be used.</p> <p>One should avoid corrosive and aggressive substances. It is prohibited to use alkaline solutions, inflammable solvents or agents containing abrasive particles.</p> <p>Do not lubricate the centrifuge motor shaft.</p> <p>The unused centrifuge should have cover opened.</p> <p>Once a week</p> <ul style="list-style-type: none">▪ Using wiping cloth, remove condensate or residues of the products from the rotor chamber. <p>Once a month</p> <ul style="list-style-type: none">▪ Check the rotor clamping thread. In case of damage, replaced it.▪ Check the centrifuging chamber whether it is damaged. In case of damage it can not be longer put into operation. Notify authorized service workshop.
---	--

10.2 *Maintenance of centrifuge elements*

	<p>The rotor pins shall be always lubricated with petroleum jelly. In this way, the uniform deflection of the buckets and quiet centrifuge operation is ensured.</p>
---	--

Cleaning of the accessories

	<p>In order to ensure safe operation one shall carry out in regular way periodical maintenance of the accessories.</p> <p>Rotors, buckets and round carriers have to withstand high stresses originating from the centrifugal force. Chemical reactions as well as corrosion (combination of variable pressure and chemical reactions) can cause destruction of metals. Hard to observe surface cracks increase gradually and weaken material without visible symptoms.</p> <ul style="list-style-type: none">▪ In case of observation of surface damage, crevice or other change, as well as the corrosion, the given part (rotor, bucket, etc.) shall be immediately replaced. <p>Clamping rotor, containers and reducer inserts must be cleaned regularly to prevent corrosion.</p>
---	---

	<p>Cleaning of the accessories shall be carried out outside of the centrifuge once every week or still better after each use. For cleaning them one should use neutral agent of pH value 6÷8. It is forbidden to use alkaline agent of pH > 8. Then, those parts shall be dried using soft fabric or in the chamber drier at ca. 50°C.</p> <p>Angle rotor should be placed on a fabric with holes facing down, for effective drying.</p> <p>Do not use bleach on plastic parts of the rotor.</p> <p>In this way, the useful service life of the device is substantially increased and susceptibility to corrosion is diminished. Accurate maintenance increases the service life as well and protects against premature rotor failures.</p> <p>Do not use bleach on plastic parts of the rotor.</p> <p>According to laboratory standards, minimize the immersion time in each solution.</p> <p>Especially prone to the corrosion are parts made of aluminium.</p> <p>Corrosion and damages resulting from insufficient maintenance could not be subject of claims lodged against the manufacturer.</p> <p>The unused rotor should have the lid removed.</p>
--	--

HS accessories maintenance.

	<p>Check the general condition of seals.</p> <p>Make sure that rubber O-rings are lightly coated with silicone grease. Use high vacuum grease, e.g. type „C” by LUBRINA.</p> <ul style="list-style-type: none"> ▪ In order to maintain hermetic sealing, it is recommended to replace the sealing rings after each autoclaving. ▪ Store hermetically sealed rotors and buckets with the lids removed.
---	---

10.3 Sterilization

Plastics - legend to abbreviations

PS	polystyrene	ECTFE	ethylene/chlorotrifluoroethylene
SAN	styrene-acrylonitrile	ETFE	ethylene/tetrafluoroethylene
PMMA	polymethyl methacrylate	PTFE	polytetrafluoroethylene
PC	polycarbonate	FEP	tetrafluoroethylene/perfluoropropylene
PVC	polyvinyl chloride	PFA	tetrafluoroethylene/perfluoroalkylvinylether
POM	acetal polyoxymethylenel	FKM	fluorcarbon rubber
PE-LD	low density polyethylene	EPDM	ethylene propylene diene
PE-HD	high density polyethylene	NR	natural rubber
PP	polypropylene	SI	silicon rubber
PMP	polymethylpentene		

One can use all standard disinfectants. Centrifuges and devices are made of different materials, one should consider their variety.

- cannot be used

In the centrifuge, disinfectants and cleaning agents generally used in medical care should be used (e.g. *Aerodesina-2000*, *Lysoformin 3000*, *Melseptol*, *Melsept SF*, *Sanepidex*, *Cutasept F*).

10.3.1 Autoclaving

- Rotors, buckets and round carriers can be sterilized in autoclave with temperature 121°C during 20 min (215 kPa), unless otherwise specified in the OPTIONAL ACCESSORY.
- During sterilization (autoclaved) by means of steam one should consider temperature resistance of individual materials.
- Deformation of the accessories (carriers or lids made of plastic) may occur during autoclaving.
- Do not autoclave disposable materials (e.g. tubes, cyto-container).
- The life of the accessory depends on the frequency of autoclaving and use.
- Autoclaving reduce lifespan of plastic components. They should be replaced if any signs of damage are visible, including a change in colour or shape or when leakage etc.
- Pressure in closed containers can cause plastic deformation or explosion.
- Prior to autoclaving the rotors and accessories, thoroughly wash and rinse with distilled water.
- Never exceed the permissible autoclaving temperature and time.
- If you want to keep the hermetic seals, replace the sealing rings after each autoclave.

●	very good	Permanent action of the substance does not cause damage through 30 days. The material is able to be resistant through years
○/●	good to limited	Continuous action of the substance causes insignificant and partly reversible damage through the period of 7-30 days (e.g. puffing up, softening, reduced mechanical durability, discolouring).
○	limited	The material should not have the continuous contact with the substance. The immediate occurrence of damage is possible (e.g. the loss of mechanical durability, deformation, discolouring, bursting, dissolving).

Rubber inserts shall be exactly cleaned or possibly replaced. Centrifuges and accessories are made of different materials.

Do not use bleach on plastic parts of the rotor.

	DANGER! MPW accessories are not biotight. For centrifuging infectious materials, it is necessary to use hermetically closed tubes meeting demands of biotightness, in order to prevent germs migration into the centrifuge and beyond it.
	User is responsible for proper disinfections of the centrifuge, if some dangerous material was spilled inside or outside of the centrifuge. During the above mentioned works one must wear safety gloves.

11 Troubleshooting

Majority of faults could be removed by switching the centrifuge OFF and then ON. After switching the centrifuge ON, there shall be displayed parameters of the recently implemented program and sound signals comprising four successive tones shall be generated. In case of short-duration power failure the centrifuge terminates the cycle and displays PROGRAM ERROR code.

problem	question	remedy
Centrifuge does not start	<i>Is supply cable plugged into mains?</i>	<i>Plugs supply cable correctly.</i>
	<i>Is master switch ON?</i>	<i>Switch ON power supply.</i>
Motor error is displayed		Call service.
Centrifuge does not start (indications are proof for cycle in progress and motor does not start)	<i>Is  symbol displayed?</i>	Wait till rotor stops and the  symbol goes off.
	<i>Is  symbol displayed?</i>	Close cover.  symbol must switch off.
	<i>Is  symbol blinking?</i>	Centrifugation cycle in progress, press STOP key or wait till cycle ends.
Centrifuge does not accelerate (unbalance error)	<i>Unequal rotor load.</i>	Centrifuge load shall be balanced.
	<i>Inclined centrifuge.</i>	Centrifuge shall be levelled.
	<i>Faulty drive (mechanical damage).</i>	Call service.
	<i>Was centrifuge displaced during operation.</i>	Switch ON the centrifuge again after opening and closing the cover.
(motor error)	<i>After stopping error rotor message is displayed</i>	Check if rotor number in started program is consistent with the number of the rotor installed in the centrifuge. Check rotor status (if there are coding magnets inserted)
	<i>Centrifuge does not recognize the rotor and does not stop.</i>	Switch the centrifuge OFF, then ON and check correctness of loaded program
It is not possible to open the cover	<i> symbol on the display is blinking, after pressing COVER key single tone is audible</i>	Rotor is still rotating. Wait for stopping of the rotor and displaying of the  symbol.
	<i>The sensor is connected correctly, and the error is still applying.</i>	Call service.
Mains failure during run	<i>The message will be displayed on the display about the decay of tension.</i>	Wait for stopping of the rotor, clear the error by pressing the SET key.
Temperature sensor error	<i>The overheating message will be displayed.</i>	Switch the centrifuge OFF, then ON.
		Call service.
Error of the exceeding the temperature (50°C) in the chamber	<i>The overheating message will be displayed.</i>	Open the cover. Wait for the centrifuge to cool down.

11.1 Messages

Screen messages that may occur during operation.	
MESSAGE	EXPLANATION
"SPEED OF ROTOR" "IDENTIFICATION <> 90 RPM"	Please try start centrifuging again, if error still occur, contact manufacturer's authorized service.
"IMBALANCE FAST STOP !" "PLEASE REMOVE CAUSE" "THEN RESTART"	Rotor is not balanced correctly, please balance rotor.
"NO ROTOR OR IDENTIFICATION" "SENSOR DAMAGED !"	Make sure, is rotor mounted in the centrifuge chamber. If it is right contact manufacturer's authorized service.
"INCORRECT ROTOR NUMBER !"	Change rotor number in centrifuge settings or use autoidentification.
"WRONG DIRECTION OF ROTATION" "OR UNKNOWN ROTOR !"	Make sure if correct rotor for centrifuge is mounted. List of accessories is described in chapter 15.
"PLEASE CLOSE THE LID" "HAND !"	Necessity of manually closing the lid.
"ROTOR STOPPING !" "Please wait..."	Initializing after mains failure with rotating rotor, wait until rotor stop.

Emergency messages	
In case of emergency messages (centrifuge is not working properly) contact the manufacturer's authorized service centre.	
MESSAGE	
"OVERHEATING MOTOR !" "INVERTER ERROR !"	
"INVERTER SERIAL BUS ERROR !"	
"TEMPERATURE SENSOR ERROR"	
"PRESSURE CONTROL FAILURE!"	
"OPENING COVER in RUN!"	
"SPEED METER ERROR"	
"I2C BUS ERROR"	
"OVERHEATING CENTRIFUGE !"	
"ROTOR OVERSPEED !"	
"COVER LOCK MALFUNCTION !"	

11.2 Emergency cover release

	<p>EMERGENCY COVER RELEASE</p> <p>In case of e.g. mains failure it is possible to open cover manually. At first, one must be sure that rotor is not in the move (use inspection glass). On the right-hand side of the casing there is a lock. Insert emergency opening key (18640) into the lock and turn it counterclockwise.</p> <p>CAUTION! <i>It is not allowed to emergency lid releasing when rotor is running! One must be sure that rotor is not in the motion (use inspection glass).</i></p>
---	--

12 Guarantee

Manufacturer grants to the Buyer the guarantee on conditions specified in the Guarantee Certificate. Buyer forfeits the right to guarantee repair when using the device inconsistently with the User manual provisions, when damage results from the User's fault.

Repairs should be carried out in authorized service workshops, granted with the MPW Certificate.

The centrifuge shall be sent to repair after decontaminating disinfections. Information about authorized service workshops could be obtained from the Manufacturer.

- Guarantee period amounts to 24 months (unless otherwise specified in the purchase documents).
- Guarantee conditions are described in guarantee card.
- The service life of the centrifuge specified by the manufacturer amounts to 10 years.
- After 24 months from the start of the warranty period (date of purchase), a technical inspection of the centrifuge should be carried out (validation) by an authorized service of the manufacturer. Subsequent inspections should be carried out at annual intervals.
- Maximum period of storage of not used centrifuge amounts to 1 year. After this period, a service authorized by manufacturer should carry out technical inspection of the centrifuge.
- Manufacturer reserves the right to make technical changes in manufactured products.

13 Transport and storage

CAUTION! Due to the heavy weight of the device, lifting and carrying it may cause injury to the spine.

- Store the device only in a closed and dry room.
- Remove rotor from centrifuge before transport.
- Lift and carry with the adequate number of people.
- Use transport equipment.
- Use the original packaging and transport protection for transport.

Transport and storage conditions.

	Storage (in the package)	Storage (without the package)	Transport
Temperature	-25 ÷ +55 °C	-5 ÷ +45 °C	-25 ÷ +60 °C (general) -20 ÷ +55 °C (air)
Relative humidity	10 ÷ 75 %	10 ÷ 75 %	10 ÷ 75 %
Pressure	70 ÷ 106 kPa	70 ÷ 106 kPa	30 ÷ 106 kPa

14 Disposal

When you are disposing the device, the respective statutory rules must be observed.

Pursuant to guideline 2002/96/EC (WEEE), all devices supplied after August 13, 2005, may not be disposed as part of domestic waste.

The device belongs to 8th group (medical devices) and is categorized in business to business field.

The icon of the crossed-out trash can shows that the device may not be disposed as part of domestic waste. The waste disposal guidelines of the individual EC countries might vary. If necessary, contact your supplier.

[4] 15115	100 ml probówka szklana (44 x 100 mm) 100 ml glass tube (44 x 100 mm)
14100+14196	
[4] 15040	100 ml probówka z pokrywką (45,2 x 103,7 mm) 100 ml tube with cap (45,2 x 103,7 mm)
12218	
RPM 3000, RCF 916, Rmax 91, ϕ 90	
13219	
bez wkładki/without adapter	
[2] 15102	płytką titracyjną MTP 28,8ml (86x128x15/17,5 mm) microtiter plate MTP 28,8 ml (86 x 128 x 15/17,5 mm)
12300	
RPM 13000, RCF 16816, Rmax 89, ϕ 90	
bez pojemnika/without bucket	
bez wkładki/without adapter	
[24] 15100	37 μ l kapilara hematokrytowa (1,4 x 75 mm) 37 μ l micro-hematocrit capillary tube (1,4 x 75 mm)

DECLARATION OF CONFORMITY

Product name: **Refrigerated and heated laboratory centrifuge
MPW-260RH**

Product type: **Laboratory centrifuge**

This declaration of conformity is issued under the sole responsibility of the manufacturer.

Product classification on the basis of the Directive 98/79/EC: **Non classified to list A or B and not for self-testing.**

Product complies with the requirements:

• **Directive 98/79/EC (IVD), including the requirements of harmonized standards:**

EN 15223-1:2016

EN ISO 18113-3:2011

EN 13612:2002

EN 61326-2-6:2006

EN 13612:2002/AC:2002

EN 61010-2-101:2002

EN 13975:2003

EN 62304:2006

EN ISO 14971:2012

EN 62304:2006/AC:2008

EN ISO 18113-1:2011

EN 62366:2008

• **selected harmonized standards of Directive 2014/35/UE (LVD):**

EN 61010-1:2010

EN 61010-2-020:2006

• **directive 2014/30/UE (EMC)**

• **directive 2011/65/UE (RoHS 2).**

NOMOGRAM

Centrifuging radius [cm]

R.C.F. (x "g")
multiple of
gravitational
acceleration

[r.p.m.]

Formula used for calculation of this nomogram :

$$R.C.F. = 11,18 * r * (n/1000)^2$$

where :

- R.C.F. - multiple of gravitational acceleration
- r - centrifuging radius (cm)
- n - rotational speed (r.p.m.)
- g - gravitational acceleration

Example of making use
of the nomogram:

A=14,4 cm
B=4600 r.p.m.
C=3400 x g

$$n = 1000 * \sqrt{\frac{RCF}{(11,18 * r)}}$$

$$r = \frac{RCF}{\left[11,18 * \left(\frac{n}{1000} \right)^2 \right]}$$
